An essential guide to valuation techniques and financial analysis With the collapse of the economy and financial systems, many institutions are reevaluating what they are willing to spend money on. Project valuation is key to both cost effectiveness measures and shareholder value. The purpose of this book is to provide a comprehensive examination of critical capital budgeting topics. Coverage extends from discussing basic concepts, principles, and techniques to their application to increasingly complex, real-world situations. Throughout, the book emphasizes how financially sound capital budgeting facilitates the process of value creation and discusses why various theories make sense and how firms can use them to solve problems and create wealth. Offers a strategic focus on the application of various techniques and approaches related to a firm's overall strategy Provides coverage of international topics based on the premise that managers should view business from a global perspective Emphasizes the importance of using real options Comprised of contributed chapters from both experienced professionals and academics, Capital Budgeting Valuation offers a variety of perspectives and a rich interplay of ideas related to this important financial discipline.

This book explains the financial appraisal of capital budgeting projects. The coverage extends from the development of basic concepts, principles and techniques to the application of them in increasingly complex and real-world situations. Identification and estimation (including forecasting) of cash flows, project appraisal formulae, and the application of net present value (NPV), internal rate of return (IRR) and other project evaluation criteria are illustrated with a variety of calculation examples. Risk analysis is extensively covered by the use of risk adjusted discount rate, certainty equivalent, sensitivity, simulation and Monte Carlo analysis. The NPV and IRR models are further applied to forestry, property and international investments. Resource constraints are introduced to the capital budgeting decisions with a variety of worked examples using linear programming technique. All calculations are extensively supported by Excel workbooks on the Web, and each chapter is well reviewed by end of chapter questions.

Capital investment decisions are a constant challenge to all levels of financial managers. Capital Budgeting: Theory and Practice shows you how to confront them using state-of-the-art techniques. Broken down into four comprehensive sections, Capital Budgeting: Theory and Practice explores and illustrates all aspects of the capital budgeting decision process. Pamela Peterson and Frank Fabozzi examine the critical issues and limitations of capital budgeting techniques with an in-depth analysis of: Classifying capital budgeting proposals Determining the relevant cash flows for capital budgeting proposals Assessing the economic value of a capital budgeting proposal using different techniques Incorporating risk into the capital budgeting decision Evaluating whether to lease or borrow-to-buy Capital Budgeting: Theory and Practice provides the knowledge, insight, and advice that will allow you to handle one of the most important aspects of your firm's financial management. Advanced enough for practitioners yet accessible enough for the novice, Capital Budgeting: Theory and Practice is your complete guide to understanding and benefiting from the essential techniques of capital budgeting.

As the objective of capital budgeting is to add values to the wealth of an owner of a business, capital budgeting primarily insists on the recovery of investments made in the projects. To improve the owner's wealth, it is important to evaluate and identify profitable projects using some evaluation tools. Concerning the project evaluation, there are traditional and non-traditional tools in application to evaluate the projects in finance and financial management. In this context, this paper illustrates the project evaluation techniques contextually with specific exhibits as examples to make the reader to understand them. There are two primary evaluation techniques: (1) Traditional Methods and (2) Non-traditional methods that incorporate time value of money in the evaluation process. This book fundamentally encompasses the traditional methods of namely Payback Period (PBP) and Accounting Rate of Return (ARR), and the non-traditional methods of Net Present Value (NPV), Internal Rate of Return (IRR), Modified Internal Rate of Return (MIRR), Profitability Index (PI) or Cost-Benefit Ratio (CBR), Discounted (modified) Payback Period (DPBP or MPBP) and Time-adjusted Discounting Method (TADM). To facilitate the explanations and understanding the project evaluation methods, appropriate exhibits are illustrated from a reader's point of view.

Project Planning, Appraisal, and Control is an all-inclusive book intended to meet the necessities of postgraduate management students specializing in the area of finance.
